

Zcomus Platform — Monetization & Money Flow Plan

Document version: 1.0
Date: August 2026
Prepared for: Cambrix / Zcomus development team
Status: Baseline plan (subscription tier details to be added in a future revision)

1. Executive summary

Zcomus is a **marketplace platform**. Customers pay **Zcomus** (not vendors directly). Zcomus holds funds until orders are delivered, retains a **platform fee**, and pays vendors their **net earnings** on a weekly settlement cycle.

Primary revenue (baseline): 8% commission on delivered order totals.

Subscription tiers: To be defined in a follow-up document.

2. Roles & money flow

Party	Role
Customer (shopper)	Pays Zcomus at checkout via ABA KHQR, Wing, or COD
Vendor (seller)	Lists products, fulfills orders, receives net payouts
Zcomus (platform / developer)	Collects pay-in, holds escrow, takes platform fee, settles vendors

High-level flow

Customer pays → Zcomus merchant account → Funds held → Order delivered
→ Platform fee (8%) retained → Vendor net paid weekly

Detailed lifecycle

- Pay-in** — Shopper pays Zcomus at checkout (ABA, Wing, or COD).
- Hold** — Funds stay in platform escrow until delivery is confirmed.
- Deliver** — Vendor ships; order marked delivered.
- Settle** — Every Monday, delivered orders from the past week are batched.
- Payout** — Net amount (gross minus 8% fee) sent to vendor's ABA KHQR / phone / Wing / bank.

Minimum payout: \$10 (balances below this roll to the next cycle).

Payout timing: 1–3 business days after settlement, depending on method.

3. How the platform developer earns

3.1 Core model: commission on GMV

Platform revenue = Delivered order total × 8%
Vendor net = Delivered order total × 92%

Example — \$100 delivered order

Item	Amount
Customer pays Zcomus	\$100.00
Platform fee (8%) — your revenue	\$8.00
Vendor receives	\$92.00

3.2 Revenue scaling

Monthly platform revenue $\approx$ Monthly delivered GMV $\times$ 8%

Monthly delivered GMV	Platform revenue (8%)
\$10,000	\$800
\$50,000	\$4,000
\$100,000	\$8,000

Before payment gateway fees, refunds, chargebacks, and operating costs.

3.3 What is NOT platform revenue

- Money in transit to vendors (92% owed on delivered orders)
- Undelivered / cancelled order amounts (until policy defines otherwise)
- COD not yet confirmed by driver

Platform earnings must be tracked in a **separate ledger account** from vendor payable balances.

4. Pay-in methods (customer → Zcomus)

Method	Description	Integration (production)
ABA KHQR / Pay	QR scan or ABA transfer at checkout	ABA PayWay / Bakong API
Wing Money	Wallet transfer from buyer	Wing merchant API
Cash on delivery (COD)	Driver collects cash; platform settles vendor after confirmed delivery	Driver / ops confirmation
Cards	Visa / Mastercard (future)	Payment gateway

Vendors choose which pay-in methods to offer in **Vendor Center** → **Payment setup** → **Accept payments**.

5. Payout methods (Zcomus → vendor)

Method	Vendor provides	Platform action
ABA	Account name + phone or uploaded KHQR image	ABA transfer API or ops scan KHQR

Wing	Account name + Wing phone	Wing payout API
Bank	Bank name + account number	Batch bank transfer

ABA KHQR upload: Vendors can upload their KHQR from ABA Mobile so settlements can be sent to the correct receive address.

6. Vendor payment setup (3 steps)

1. **Accept payments** — Enable ABA, Wing, COD for checkout.
2. **Payout account** — Enter wallet/bank details; upload ABA KHQR if applicable.
3. **Review & save** — Confirm and store payout profile.

Order fulfillment progress (vendor side): **Paid** → **Packed** → **Shipped** → **Delivered**.

7. Technical implementation phases

Phase 1 — Current (frontend demo)

- Vendor UI: pay-in toggles, payout profile, KHQR upload
- Demo balances and 8% fee calculation
- Local storage only (no real money movement)

Phase 2 — Pay-in integration

- Zcomus merchant accounts (ABA business, Wing merchant)
- Checkout API: create payment / dynamic QR per order
- Webhooks: `payment.confirmed` → mark order paid, credit vendor ledger as **held**

Suggested APIs

- `POST /checkout/pay` — initiate pay-in
- `POST /webhooks/aba` — payment confirmation
- `POST /webhooks/wing` — payment confirmation

Phase 3 — Ledger & escrow

- `vendor_balances` : pending, available, paid_out
- `payment_events` : pay-in, fee, release, payout
- On delivery: move pending → available (deduct 8% platform fee)
- COD: release only after driver confirms collection

Phase 4 — Automated payout

- Weekly cron (Monday): vendors with available ≥ \$10
- Read payout profile (KHQR / phone / bank)
- Execute transfer; record payout ID; mark ledger paid_out
- Notify vendor in Vendor Center

Suggested APIs

- `POST /vendor/payout-profile`
- `GET /vendor/balance`
- `POST /admin/payouts/run`
- `GET /vendor/payouts`

Phase 5 — Admin & reconciliation

- Dashboard: GMV, platform fees earned, payouts owed/sent
 - Failed payout retry queue
 - Optional: KHQR decode validation vs account name
-

8. Additional revenue opportunities (future)

Model	Description
Featured listings	Vendors pay to boost visibility on homepage / search
Vendor subscription	Pro tier — details in separate document
Listing fee	One-time fee per published product
COD handling fee	Surcharge on cash-on-delivery orders
Payment markup	Recover ABA/Wing gateway costs within or on top of 8%

9. Policy summary (vendor-facing)

- Customers pay **Zcomus**, not the vendor directly (buyer protection).
 - Pay-in is **held** until delivery is confirmed.
 - **8% platform fee** applies to delivered order totals at settlement.
 - **Weekly settlements** every Monday; **\$10 minimum** payout.
 - Payout processing: 1–3 business days after settlement.
-

10. Subscription model

To be added — vendor subscription tiers, pricing, and benefits will be documented in **Zcomus Platform — Subscription Plan (v1.1)**.

11. Appendix — Key constants (current app)

Constant	Value
Platform fee rate	8% (PLATFORM_FEE_RATE = 0.08)
Minimum payout	\$10
Settlement day	Monday (weekly)
Demo storage keys	zcomus-account-payout-profile, zcomus-account-payin-setup
